

Fuel Cell Hyundai Tuscon

Hydrogen Filling Station Information

Hydrogen pumps can be found in two varieties - H35 (5000 psi) and H70 (10,000 psi). An H70 pump is needed to completely fill the vehicle. An H35 pump will only yield a 1/2 tank fill regardless of the vehicle's initial hydrogen level before filling attempt.

Retail pumps will be located in normal filling stations with gasoline/diesel/E85 pumps.

The retail pumps will only accept credit cards – No debit cards, gift cards, etc.
