

## 2021 Volkswagen ID.4

### 12 Volt Jump Start

See Mechanical Key Entry Tip Sheet for vehicles with locked doors

12-Volt jump starts on ID.4 are performed on the Positive (+) side of the battery and Ground Lug jump post (-) on the firewall behind the battery.

Jump procedure with jumper cables:

1. Connect Positive (+) lead to Positive (+) side of ID.4 battery
2. Connect Positive (+) lead to Positive (+) side of donor vehicle battery
3. Connect Negative (-) lead to suitable chassis ground of donor vehicle
4. Connect Negative (-) lead to ground lug jump post on ID.4

**Removal of Jumper Cables is the Reverse of sequence above**

With key fob present, enter the vehicle and press foot brake to activate the vehicle's drive system. When the electric motor begins running, the instrument cluster will illuminate. Turn off ID.4 headlamps and immediately disconnect 12-Volt jump source.
