

2017 Alfa Romeo Giulia and Stelvio

Mechanical Entry and Key Fob

There is a mechanical key located inside the key fob. It is found by sliding off the back cover.

The Giulia and Stelvio have an exposed lock cylinder in the driver side door handle for mechanical entry into the vehicle.

When reinstalling the key into the fob pay close mind that it only goes in one way. See notch in key.

The battery is located under the key and easily replaced while the key is out.

Weak Key Fob Battery

When Alfa Romeo key fob batteries become weak the vehicle will resist acknowledging its presence and may not start.

Place the key fob in the center console near the embossed image on the rubber mat and the vehicle should start.

Immediately replace the key fob battery.
